WELCOME TO KOONWARRA MERINO STUD'S 48th ANNUAL UNHOUSED RAM SALE

On behalf of Koonwarra Merino & Poll Merino Stud we welcome you to the 48th annual Koonwarra on-property **unhoused** ram sale – the 19th sale at Little Range and the 12th under the total ownership of C.T. Merriman & Son.

The 120 May/June 2024 drop rams in this year's sale catalogue will be available for inspection from 10.00am, with the auction to commence at 1.00pm.

To assist with your selections, all 120 sale rams were **side sampled** in the first week of **August 2025** and fleece tested by Riverina Wool Testers, with the averages being micron 18.7, SD 3.1, CV 16.3, CF 99.4 and SpinF 17.6. The **meat scanning** was done on **20th September 2025** by Rick Power, while the **current body weights** for the 120 selected rams on the **5th September 2025**.

On the day of the sale, these Koonwarra **paddock raised** rams will be 15 months old and will have **5 months wool** on them. The rams were **shorn** on **23rd April 2025** for their greasy fleece weight percentage.

These rams have been paddock reared on grass with access to grain feeders, but **have not been shedded**, ensuring these young rams are acclimatised to natural conditions, be it weather patterns or grass availability. They are in good working order and well grown with good body weights.

Jono, Anna, Digby, Toby and Zoe, along with Charlie and Pip, invite you to join us at Little Range. A light lunch will be provided, along with a BBQ after the sale.

2025 BREEDING FAMILIES AND SIRE INFORMATION

For the 2024 Koonwarra joining program, we did an AI program as well as paddock joinings.

SEMEN SIRES USED FOR AI PROGRAM

- Tara Park 035 (sired by TP 7447) – Pink tag: Same sire as first seen in last year’s sale group.
- Winyar 450 – White tag: This is an older sire that we brought out of the semen storage tanks.
- KWA N Poll 001 – Black tag.
- KWA N Poll 030 – Black tag.
- KWA N Poll 650 – Black tag.

Ram sale measurements comply with the standards recommended by NSW Stud Merino Breeders Association.

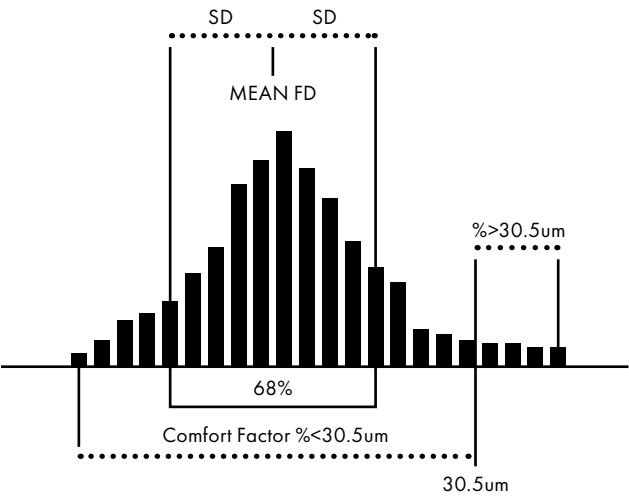

FLEECE TESTING DEFINITIONS

FD – Fibre Diameter: The mean (average) micron result of a sample.

SD – Standard Deviation: Measures in microns the spread of fibres either side of the mean FD in which 68% (two-thirds) of the fibres lie. The lower the SD the more uniform the wool.

CV – Coefficient of Variation: The CV is the SD divided by the mean FD x 100. CV measures the FD variability as a percentage. CV tends to fall in the range of 15% to 30% – 15% is a very uniform wool, while 30% is a highly variable wool.

CF – Comfort Factor: Measures the percentage of fibres below 30.5 microns. Calculated as 100 minus % of fibres below 30.5um.

PLEASE NOTE: Please remember that all these May/June 2024 drop rams could have a six to eight weeks’ spread in their date of birth, from the earliest AI lamb born to the last paddock joined lamb born. Therefore the ram body weights are done only as a guide.

On sale day, there will be individual and current information on each ram including micron, SD, CV, GFW% and comfort factor plus sire/family and current body weights along with meat indexes and ram power indexes.

MERINOSELECT RAM POWER INDEXES DEFINITIONS

Ram Power Indexes to be done by Rick Powers on 20th September 2025.

Merino select ram power indexes definitions:

FP – Fibre Production: Rates animals on their ability to produce merino’s for wool production. The FP index is aimed at those producers whose majority of sheep income comes from their wool clip. It is for self-replacing merino flocks who keep wethers as part of their wool producing flock. The FP index is calculated using a combination of fleece weight, fibre diameter, body weight and CV of that animal.

MP – Merino Production: Rates the animals on their ability to produce progeny for a finer wool operation that has significant surplus sheep sales. The MP index is aimed at those producers whose sheep income is a balance of both wool and surplus sheep sales. It is for self-replacing merino flocks who do not keep their wethers for wool production. The MP index is calculated using a combination of fleece weight, fibre diameter, body weights and CV of that animal.

DP – Dual Purpose: Target production systems with a balance of income from wool from Merinos and meat production from lambs by terminal sires. It focuses on the genetic improvement of fleece weight and body weight.

NOTE: The figures for the Ram Power Indexes provided in this catalogue are on the Koonwarra 2024 drop rams only. The above definitions have been provided by Sheep Genetics.

MEAT INDEX EXPLANATION

The Meat Index allows a group of young sheep with different live weights, eye muscle dimensions and fat depth to be analytically compared.

- > The **Eye Muscle Width A** is more to do with type of animal, i.e. shape of that animal.
- > The **Eye Muscle Depth B and C Fat** is associated with the environment and feeding conditions.
